Professional Summary

Technical Account Manager with a software engineering background spanning fintech systems and low-level engineering. Skilled at managing enterprise accounts, resolving critical technical escalations, and translating deep technical expertise into strong customer relationships and renewals.

Education

FAST - National University of Computer and Emerging Sciences **Aug. 2020 – Jun 2024**
Bachelor of Science in Computer Science *Karachi, Sindh*

Experience

Motive **June 2026 – Present**
Technical Account Manager *Remote (Supporting United States accounts)*

- Manage a portfolio of 34 Mid-Market Commercial accounts representing over $5M USD in ARR, serving as the primary technical point of contact for U.S.-based customers.
- Turned around customer sentiment for 3 at-risk accounts by resolving critical technical issues, playing a lead role in converting them into 5-year renewals, and becoming a trusted escalation point through strong relationships with customer POCs and their leadership.
- Partner closely with engineering to understand product architecture, including microservice boundaries and which frontend features map to which backend services, to speed up root-cause analysis and issue triage.
- Evaluate feature updates before rollout, monitor for stability issues, and identify product gaps and bugs, feeding recommendations to engineering and using read-only database access to independently investigate root causes.

Vaulsys **October 2024 – June 2026**
Associate Software Engineer *Karachi, Sindh*

- Core contributor to the dedicated IllicoCash (RAWBANK) engineering team, delivering new features, integrating external services, and resolving complex production issues through root-cause analysis in a fast-paced fintech environment.
- Designed and deployed a microservices-based bill management and aggregation system using Spring Boot and RabbitMQ with fault-tolerant transaction processing.
- Integrated MoneyGram SOAP remittance services with idempotent transaction handling for reliable cross-border payments.
- Delivered a UnionPay-certified prepaid card management portal for Lari Exchange and an ISO 20022 SWIFT MT-MX conversion platform, later licensed to additional enterprise clients, both using Spring Boot and Vaadin.
- Built RESTful banking APIs for HBL supporting card management, balance inquiry, and financial transactions.
- Led the transition to a Git-based version control and branching strategy for approximately 40 Java services and a Vue.js application, formalizing the in-house → SIT → production release workflow and reducing merge conflicts.

Habib Bank AG Zurich Services **April 2024 – October 2024**
Software Engineer *Karachi, Sindh*

- Maintained core banking products ensuring 99.9% uptime for thousands of daily financial transactions.
- Automated vendor contract management with Java and Sybase SQL, eliminating manual processing for payment calculations.
- Enhanced bank locker module in the web banking platform and debugged production incidents, including transaction failures and E-Invoice issues, through systematic root-cause analysis.

Recent Projects

Ignis - 3D Game Engine | *C17, C++, Vulkan, GLSL* **Oct 2025 – Ongoing**

- Built engine core in pure C17 with tagged memory allocation, a freelist-backed GPU renderbuffer abstraction, and a modular system architecture covering geometry, materials, shaders, textures, fonts, and resource loading.
- Implemented a multi-threaded job system with a cross-platform thread pool (Win32/pthreads), three priority queues, and domain-specific job types to decouple asset loading from the render thread.
- Designed a render view pipeline with multi-renderpass architecture, Phong lighting, transparency, cubemap skyboxes, and a font rendering system supporting bitmap and TrueType fonts via stb_truetype.
- Built cross-platform abstraction layer for Windows, Linux, and macOS with automated shader compilation tooling and Doxygen documentation.

Islah.ai - Islamic Lifestyle App | *Flutter, Python, TensorFlow* **Aug 2023 – Jun 2024**

- Built cross-platform mobile app with AI-powered prayer posture correction, Qibla direction, and automated alerts.
- Fine-tuned BlazePose model achieving 92% accuracy with sub-50ms latency for real-time prayer posture validation.
- Created Flutter frontend with BLoC pattern and Flask backend with JWT authentication for pose analysis and prayer services.

Tech Tree - E-Learning Platform | *ASP.NET Core, Entity Framework* **Oct 2023**

- Built full-stack platform with ASP.NET Core MVC supporting course management, enrollment, and content delivery.
- Implemented role-based access control with Microsoft Identity Framework for Admin, Instructor, and Student roles.
- Designed normalized MSSQL database with EF Core migrations and responsive Razor Pages UI with Bootstrap.

Technical Skills

Languages: Java, C#, C++, C, Python, JavaScript, TypeScript, Dart, SQL
Frameworks: Spring Boot, ASP.NET Core, Hibernate, Entity Framework, Flask, Angular, React, Flutter
Databases: Oracle, SQL Server, MySQL, MongoDB, Redis, Sybase
DevOps: Docker, Kubernetes, Azure, AWS, CI/CD (GitHub Actions, Jenkins)
Tools: Git, Postman, JIRA, IntelliJ IDEA, Visual Studio
APIs: REST, SOAP, gRPC, Kafka, JWT, Payment Gateways (MoneyGram, UnionPay)
